

## Fact 6: The terms “global warming” and “climate change” are *almost* interchangeable

- Greenhouse gases raise the temperature. But when the temperature rises, a lot of other things change, including:
  - Weather patterns source: NCA
  - The frequency and intensity of extreme weather events source: NCA
  - Ocean acidity source: NCA
  - Ocean currents source: NCA
  - Sea level source: NCA
  - Ecosystem diversity source: IPCC
